

TASK 4

Task: Write a simple guide outlining the command to check the version of the current Ubuntu OS. Include explanations of the command and its output, along with sample screenshots.

The following are the steps to check the version of ubuntu:

1. Open terminal
2. Use “`lsb_release -a`” command

Explanation : This command is used to display information about the Linux distribution you are using, such as its ID, release number, codename, and other details

A terminal window with a dark purple background. The prompt is 'venis@venis-VirtualBox:~\$'. The command 'lsb_release -a' has been entered. The output is: 'No LSB modules are available.', 'Distributor ID: Ubuntu', 'Description: Ubuntu 22.04.3 LTS', 'Release: 22.04', 'Codename: jammy'. The prompt 'venis@venis-VirtualBox:~\$' is shown again with a white cursor.

```
venis@venis-VirtualBox:~$ lsb_release -a
No LSB modules are available.
Distributor ID: Ubuntu
Description:   Ubuntu 22.04.3 LTS
Release:      22.04
Codename:     jammy
venis@venis-VirtualBox:~$
```
